TMSSREPORTCOLUMNDELETE

This Environmental Variable TMSSREPORTCOLUMNDELETE can be used to remove columns from a Command Line Program output.

To remove columns, set the variable to an array of comma delimited Integers, each representing a column that you would like to remove.

The maximum Integer number is 32. If the value exceeds the number of columns in the report, or if the value exceeds **32**, the Integer is ignored.

The sequence of the array of Integers is not important.

Example

To remove columns 3 and 4

Windows Command Line

```
set TMSSREPORTCOLUMNDELETE=3,4
```

Windows PowerShell

```
$env:TMSSREPORTCOLUMNDELETE = "3,4"
```

Linux

```
export TMSSREPORTCOLUMNDELETE=3,4
```
