TMSSREPORTCOLUMNDELETE

This environmental variable TMSSREPORTCOLUMNDELETE can be used to remove columns from a Command Line Program output.

To remove columns, set the variable to an array of comma delimited integers, each representing a column that you would like to remove.

The maximum integer number is 32. If the value exceeds the number of columns in the report, or if the value exceeds **32**, the integer is ignored.

The sequence of the array of integers is not important.

Example

To remove columns 3 and 4 use

<sxh> set TMSSREPORTCOLUMNDELETE=3,4, </sxh>
