Movement Tree

The Movement Tree provides a list of all available movements, organized in the hierarchy of Server, Customer, Media Type, Receiving Repository, and Sending Repository.

Any customers with a repository with the **Do not slot** option set to true will display with a purple background.

Build/Update Movement Tree

When you first login to Checkpoint all current movement data will be automatically loaded into the movement tree. As new movements can be added to TapeTrack at any time it is advisable to refresh or reload the data in the movement tree to ensure displayed volumes are up to date.

Updating the Movement Tree will clear any volumes in the To Scan window

To refresh the movement tree select, from the main menu, $\texttt{Process} \rightarrow \texttt{Build/Update}$ Movement Tree.
