

# Emailing Reports

When producing reports via the TapeTrack Command Line Interface programs, you may wish to send these reports via an email attachment.

This can be achieved using the following methods:

1. Via a command line SMTP agent such as [blat](#) or mailx.
2. Via the Send Email action of Windows Scheduler.
3. Via the TapeTrack SMTP PowerShell script.

## The TapeTrack SMTP PowerShell Script

The TapeTrack SMTP PowerShell Script allows files to be sent to one or more users via SMTP. The script is installed as part of the TapeTrack Server Utilities Package.

### Enabling Signed Scripts

The TapeTrack SMTP PowerShell Script is digitally signed with GazillaByte's code signing certificate, but by default Windows disallows the invocation of all PowerShell scripts.

To enable signed scripts:

1. Open Windows PowerShell as the Windows Administrator.
2. Run the command `Set-ExecutionPolicy RemoteSigned`

### Command Line Arguments

The PowerShell script takes the following arguments:

- 1. config this is the path to the configuration file.

2. `smtpserver` this is the IP address or name of the SMTP Server.
3. `smtpport` this is the port of the SMTP Server.
4. `smtpuser` this is the userid of the user used to authenticate on the SMTP Server.
5. `smtppw` this is the password of the user used to authenticate on the SMTP Server.
6. `smtpssl` This enables SSL encryption for the email if required by the SMTP Server.

```
<code> Powershell.exe -File TMSSSMTP.ps1 -smtpuser tapetrack@gazillabyte.com -smtppw  
mypassword -smtpssl <code>
```
