# TMSS10Custom\_BillByAge

TMSS10Custom\_BillByAge will produce TapeTrack Billing XML records based on the length of time a Volume has been in a Repository.

## **Synopsis**

TMSS10Custom\_BillByAge [-R date range] [-S logon string] [-V volume filter] [-a actual repository] [-f template file]

### **Options**

- -R Specifies the date range.
- -S The Logon string argument sets the Server Logon Information
- -V Volume Filter which can be used to filter the traversal of Customer, Media, Volume, Repository and Flag values.
- -a Actual Repository filter
- f XML template file (default = \$template.xml)

If an argument value starts with the value FI:, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named ACME\_volumes has the content ACME\_\*.\*, specifying FI:/etc/ACME\_volumes will have the same effect as -V ACME.\*.\*. Using FI: to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with \*LIST: then rather than matching the literal value, each record in the file specified as \*LIST:filename will be tested. If one matches the match will succeed.
