

# TMSS10ExpireByDate

TMSS10ExpirebyDate searches the [Volumes](#) and adds a Move Pending [Flag](#) (p) to all [Volumes](#) that match the [Volume](#) and Date Range filters.

## Synopsis

```
TMSS10ExpireByDate [-O Expiry Date Range Offset File] [-R Expiry Date Range]
[-S logonstring] [-V volumefilter] [-c Configuration File] [-f Force Expiry]
[-r Repository Filter] [-t Test Mode]
```

## Options

TMSS10ExpireByDate command options:

- -O Expiry date range offset file location
- -R Expiry date range
- -S Logon string argument sets the [Server Logon Information](#).
- -V [Volume Filter](#) which can be used to filter the traversal of [Customer](#), [Media](#), [Volume](#), [Repository](#) and [Flag](#) values.
- -c The config file argument specifies the path to the Batch Configuration File. The Batch Configuration File allows you to perform advanced traversal of [Customer](#), [Media](#) and [Volumes](#), perform advanced Barcode pre and post processing and route the program output to syslogd.
- -f Forces expiry
- -r Target [Repository](#)
- -t Test mode, **true** performs task without applying updates

If an argument value starts with the value **FI:**, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named ACME\_volumes has the content **ACME\_.\*.\***, specifying **FI:/etc/ACME\_volumes** will have the same effect as **-V ACME.\*.\***. Using **FI:** to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with **\*LIST:** then rather than matching the literal value, each record in the file specified as **\*LIST:filename** will be tested. If one matches the match will succeed.

## Notes

### Technical Support

The TapeTrack Software is commercially supported by a full time help desk staff.

If you are experiencing problems or want some advice on how to configure or use the product please see the [Accessing Technical Support](#) page

## Exit Status

1. **zero** Program has ended successfully.
2. **non-zero** Program has not ended successfully.

## Environment

**TMSSERVERPROXY** If defined the program will route all TapeTrack TCP/IP traffic through a HTTPS proxy. The value of the variable should be in the format user:password@host:port. To debug the proxy connection use variable [TMSSAPILOGDIR](#).

**TMSSAPILOGDIR** If defined the program will write out a trace file to this directory.

**TMSSPWPATH** When no password value is passed in the logon string the program will look for the password in file C:/tapetrack/pw/batch, where user is the user value passed in the logonstring. If you wish to change this default path, you can set the path in [TMSSPWPATH](#).

**TMSSNOMD5** If defined the program will not MD5 hash passwords before sending them to the TapeTrack Server. This is required when relying on [Windows Active Directory](#) authentication. It should be noted that although the password is not being hashed, it is still encrypted during transmission.

## Examples

### Command Line Syntax

```
TMSS10ExpireByDate -S username:-password@localhost -V "US01.*.*" -R "*-5:*
```

### Output

```
C:\WINDOWS\system32>TMSS10ExpireByDate -S username:-password@localhost -V
"US01.*.*" -R "*-5:*
