TMSS10ListHistory

TMSS10ListHistory lists the Storage History for each Repository within the specified date range.

Synopsis

TMSS10ListHistory [-A attribute index] [-C current location] [-I interface filter] [M mode] [-R date range] [-S logon string] [-T target location] [-V volume filter] [-c configuration file] [-t type] [-u user]

Options

- `-A` Extended Attribute index (default = 0).
- `-C` Current Volume location.
- `-I` Interface Filter allows filtering of results by Desktop Software Interface.
- `-M` Report mode (default = 1).
- `-R` Specifies the date range.
- `-S` The Logon string argument sets the Server Logon Information.
- `-T` Volume target location.
- `-V` Volume Filter which can be used to filter the traversal of Customer, Media, Volume, repository and Flag values.
- `-c` The config file argument specifies the path to the Batch Configuration File. The Batch Configuration File allows you to perform advanced traversal of Customer, Media and Volumes, perform advanced Barcode pre and post processing and route program output to syslogd.
- `-t` Type allows filtering of results by type of database entry.
- `-u` User allows filtering of results by User-ID.

If an argument value starts with the value `FI:`, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named ACME_volumes has the content ACME_*.*, specifying `FI:/etc/ACME_volumes` will have the same effect as `-V ACME.*.*`. Using `FI:` to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with *LIST: then rather than matching the literal value, each record in the file specified as *LIST:filename will be tested. If one matches the match will succeed.
