

# TMSS10ListOutages

TMSS10ListOutages lists Server outages within the specified date range

## Synopsis

```
TMSS10ListOutages [-R date range] [-S logon string] [-c configuration file]
```

## Options

- -R Specifies the date range.
- -S The Logon string argument sets the [Server Logon Information](#)
- -c The config file argument specifies the path to the Batch Configuration File. The Batch Configuration File allows you to perform advanced traversal of [Customer](#), [Media](#) and [Volumes](#), perform advanced Barcode pre and post processing and route program output to syslogd.

If an argument value starts with the value FI:, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named ACME\_volumes has the content ACME\_\*.\*, specifying FI:/etc/ACME\_volumes will have the same effect as -V ACME.\*.\*. Using FI: to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with \*LIST: then rather than matching the literal value, each record in the file specified as \*LIST:filename will be tested. If one matches the match will succeed.

## Technical Support

The TapeTrack Software is commercially supported by a full time help desk staff.

If you are experiencing problems or want some advice on how to configure or use the product please see the [Accessing Technical Support](#) page.

## Exit Statuses

1. **zero** Program has ended successfully.
2. **non-zero** Program has not ended successfully.

## Environment

## Files

**stdout:** Output Reports.

**stderr:** Diagnostic messages.

**stdin:** Program input.

## Example

### Command line syntax

```
TMSS10ListOutages -S user:-password@server -R "*-2:*
```

### Output

```
                System: TapeTrack
Report Description: TapeTrack Outage Report
Report Width: 90 bytes

Seq.   Start                End                Past
