

TMSS10ListRepositories

TMSS10ListRepositories list the Current status of each [Repository](#) including Capacity, Usage, Incoming [Volumes](#), Outgoing [Volumes](#) and Assigned Slots.

Synopsis

```
TMSS10ListRepositories [-S logon string] [-V volume filter]
```

Options

- **-R** Specifies the date range.
- **-S** The Logon string argument sets the [Server Logon Information](#).
- **-V Volume Filter** which can be used to filter the traversal of [Customer](#), [Media](#), [Volume](#), [Repository](#) and [Flag](#) values.

If an argument value starts with the value **FI:**, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named **ACME_volumes** has the content **ACME_*.***, specifying **FI:/etc/ACME_volumes** will have the same effect as **-V ACME.*.***. Using **FI:** to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with ***LIST:** then rather than matching the literal value, each record in the file specified as ***LIST:filename** will be tested. If one matches the match will succeed.
