

# TMSS10ListRepositories

TMSS10ListRepositories list the Current status of each [Repository](#) including Capacity, Usage, Incoming [Volumes](#), Outgoing [Volumes](#) and Assigned Slots.

## Synopsis

```
TMSS10ListRepositories [-S logon string] [-V volume filter]
```

## Options

- -R Specifies the date range.
- -S The Logon string argument sets the [Server Logon Information](#).
- -V [Volume Filter](#) which can be used to filter the traversal of [Customer](#), [Media](#), [Volume](#), [Repository](#) and [Flag](#) values.

If an argument value starts with the value FI:, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named ACME\_volumes has the content ACME\_\*.\*, specifying FI:/etc/ACME\_volumes will have the same effect as -V ACME.\*.\*. Using FI: to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with \*LIST: then rather than matching the literal value, each record in the file specified as \*LIST:filename will be tested. If one matches the match will succeed.
