

# TMSS10MoveList

This program produces a report of all [Volumes](#) that are in a Move Status.

## Synopsis

```
TMSS10MoveList [-S logonstring] [-V volumefilter] [-C repfilter] [-T  
repfilter] [-v] [-c configfile]
```

## Description

TMSS10MoveList produces a report listing all tape [Volumes](#) that are in a “Move Status”, i.e. they have a different Current and Target [Repository](#).

## Options

The options which apply to the TMSS10MoveList command are:

- -S The logonstring argument sets the Server logon information (see [Command Line Server Argument](#)).
- -V The volume filter argument sets the [Volume Filter](#) which can be used to filter the traversal of [Customer](#), [Media](#) and [Volume](#) values.
- -C Current [Repository](#) Filter.
- -T Target [Repository](#) Filter.
- -v Print Virtual Locations.
- -c The configfile argument specifies the path to the Batch Configuration File.

If an argument value starts with the value FI:, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named ACME\_volumes has the content ACME\_\*.\*, specifying FI:/etc/ACME\_volumes will have the same effect as -V ACME.\*.\*. Using FI: to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with \*LIST: then rather than matching the literal value, each record in the file specified as \*LIST:filename will be tested. If one matches the match will succeed.
