TMSS10MoveLocation

TMSS10MoveLocation puts selected Volumes in a move from one Repository to another.

Synopsis

TMSS10MoveLocation [-C check if volume is assigned to a container] [-M move only if container moving] [-S logon string] [-T move only if assigned container target matches] [-V volume] [-X skip volumes assigned to a container] [-c configuration file] [-e exclude volumes already moving] [-f from repository] [-l apply move lock during move] [-t to repository]

Options

- - C Move Volume only when assigned Container is moving and matches move requirements.
- -M Move only if the assigned Container is moving (requires -C) (default = false).
- -S The Logon string argument sets the Server Logon Information.
- -T Move only if the assigned Container Target matches (requires -C) (default = false).
- V Volume Filter which can be used to filter the traversal of Customer, Media, Volume, Repository and Flag values.
- -X Skip any volumes already assigned to a container.
- c The config file argument specifies the path to the Batch Configuration File. The Batch
 Configuration File allows you to perform advanced traversal of Customer, Media and Volumes,
 perform advanced Barcode pre and post processing and route program output to syslogd.
- -e Exclude any Volumes that are already in a Move Status.
- f Repository to Move Volumes from.
- - l Apply a move-lock to Volumes during move.
- -t Repository to move Volumes to.

If an argument value starts with the value FI:, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named ACME_volumes has the content ACME_*.*, specifying FI:/etc/ACME_volumes will have the same effect as -V ACME.*.*. Using FI: to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with *LIST: then rather than matching the literal value, each record in the file specified as *LIST:filename will be tested. If one matches the match will succeed.

Technical Support

The TapeTrack Software is commercially supported by a full time help desk staff.

If you are experiencing problems or want some advice on how to configure or use the product please

Last update: 2025/01/21 22:07

see the Accessing Technical Support page.

Exit Statuses

- 1. **zero** Program has ended successfully.
- 2. non-zero Program has not ended successfully.

Environment

Files

stdout: Output Reports. **stderr:** Diagnostic messages.

stdin: Program input.

Example

Command line syntax

Move all US02 LTO Volumes with a Barcode ending in 5L6.

```
\label{thm:continuous} TMSS10 Move Location - S user: -password @ server - V "US02.LT0.*5L6" - f "LIBR" - t "OFFS"
```

Output

```
System: TapeTrack
Report Description: Volumes Moved
       Report Notes: From(LIBR) To(OFFS)
    Production Time: Monday, November 27, 2017 - 12:56:38 (AUS Eastern
Daylight Time)
       Report Width: 92 bytes
                                                   To
Seq.
        Barcode
                              From
Container
