

# TMSS10MovePending

Puts [Volumes](#) with a **Move Pending Flag** into a Move Status to the [Volume's](#) Current [Repository's](#) Next Repository, as set in the Options Tab of the Repository Properties Window. If the [Volume's](#) current Repository has no Next Repository, the **Move Pending Flag** will be added, but no move will be initiated.

## Synopsis

```
TMSS10MovePending [-S server] [-T test mode] [-V volume filter] [-c config file] [-o override file]
```

## Options

- -S The Logon String argument sets the [Server Logon Information](#)
- -T Test mode, default = false..
- -V [Volume Filter](#) which can be used to filter the traversal of [Customer](#), [Media](#), [Volume](#), [Repository](#) and [Flag](#) values.
- -c The config file argument specifies the path to the Batch Configuration File. The Batch Configuration File allows you to perform advanced traversal of [Customer](#), [Media](#) and [Volumes](#), perform advanced Barcode pre and post processing and route program output to syslogd.
- -o Override file location.

If an argument value starts with the value FI:, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named ACME\_volumes has the content ACME\_\*.\*, specifying FI:/etc/ACME\_volumes will have the same effect as -V ACME.\*.\*. Using FI: to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with \*LIST: then rather than matching the literal value, each record in the file specified as \*LIST:filename will be tested. If one matches the match will succeed.

## Technical Support

The TapeTrack Software is commercially supported by a full time help desk staff.

If you are experiencing problems or want some advice on how to configure or use the product please see the [Accessing Technical Support](#) page.

## Exit Statuses

1. **zero** Program has ended successfully.

2. **non-zero** Program has not ended successfully.

## Files

**stdout:** Output Reports.

**stderr:** Diagnostic messages.

## Example

### Command Line Syntax

```
TMSS10MovePending -S user:-password@localhost -V "US01.LT0.*"
```
