

# TMSS10Page2CSV

TMSS10Page2CSV converts a page formatted report to a CSV file.

## Synopsis

This program expects a variable number of arguments. Each argument is a string representing a filter, the first filter represents the string that should be considered a page break, while each subsequent argument represents a string that should be considered a record to be extracted.

## Options

This program has no options.

## Exit Status

- **zero** Program has ended successfully.
- **non-zero** Program has not ended successfully.

## Environment

**TMSSBEEP** If defined the program will beep whenever an error occurs.

**TMSSCHOMP** If defined the program will remove the number of characters defined from the beginning of the extracted string.

## Files

**stdout:** Output Reports.

**stderr:** Diagnostic messages.

**stdin:** Program input.

## Example

### Command Line Syntax

Define TMSSCHOMP to remove the first 32 bytes from extracted string

Set first argument (\*=\*) to define page break, any string starting with character =

Extraction filter ("Media Status:\*") for field 1  
Extraction filter ("Data Expiration:\*") for field 2  
Direct input file media.txt to stdin

```
set TMSS10CHOMP=32  
TMSS10Page2CSV "=" "Media Status:*" "Data Expiration:*" < "media.txt"
```
