TMSS10SCSI2ScanFile

Synopsis

TMSS10SCSI2ScanFile [-C changer device list] [-D tape drive elements] [-I import/export elements] [-S storage elements] [-T transfer elements] [-V volume filter] [-e device failure error]

Description

TMSS10SCSI2ScanFile creates a Scan-File from the current inventory of SCSI attached Media Changer.

Options

- `-C` Changer device list.
- `-D` Exclude contents of tape drive elements (default = false).
- `-I` Exclude contents of import/export elements (default = false).
- `-S` Exclude contents of storage elements (default = false).
- `-T` Exclude contents of transfer elements (default = false).
- `-V` Volume Filter which can be used to filter the traversal of Customer, Media, Volume, repository and Flag values. (default = !(CLN*))
- `-e` Return error if any devices fail (default = false).

If an argument value starts with the value `FI:`, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named ACME_volumes has the content `ACME_*.*`, specifying `FI:/etc/ACME_volumes` will have the same effect as `-V ACME.*.*`. Using `FI:` to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with *LIST: then rather than matching the literal value, each record in the file specified as *LIST:filename will be tested. If one matches the match will succeed.
