

# TMSS10SCSI2ScanFile

## Synopsis

```
TMSS10SCSI2ScanFile [-C changer device list] [-D tape drive elements ] [-I import/export elements] [-S storage elements] [-T transfer elements] [-V volume filter] [-e device failure error]
```

## Description

TMSS10SCSI2ScanFile creates a Scan-File from the current inventory of SCSI attached Media Changer.

## Options

- -C Changer device list.
- -D Exclude contents of tape drive elements (default = false).
- -I Exclude contents of import/export elements (default = false).
- -S Exclude contents of storage elements (default = false).
- -T Exclude contents of transfer elements (default = false).
- -V [Volume Filter](#) which can be used to filter the traversal of Customer, Media, Volume, repository and [Flag](#) values. (default = !(CLN\*) )
- -e Return error if any devices fail (default = false).

If an argument value starts with the value `FI:`, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named `ACME_volumes` has the content `ACME_*. *`, specifying `FI:/etc/ACME_volumes` will have the same effect as `-V ACME_*. *`. Using `FI:` to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with `*LIST:` then rather than matching the literal value, each record in the file specified as `*LIST:filename` will be tested. If one matches the match will succeed.

## Technical Support

The TapeTrack Software is commercially supported by a full time help desk staff. If you are experiencing problems or want some advice on how to configure or use the product please see the [Accessing Technical Support](#) page.

## Exit Statuses

1. **zero** Program has ended successfully.

2. **non-zero** Program has not ended successfully.

## Environment

## Files

**stdout:** Output Reports.

**stderr:** Diagnostic messages.

**stdin:** Program input.

## Example

### Command line syntax
