# TMSS10UploadFile

### **Synopsis**

TMSS10UploadFile [-C Customer-ID] [-E expiry date] [-S logon string] [-d file description] [-f file name]

### **Description**

TMSS10UploadFile uploads a file to the TapeTrack server to the specified Customer-ID.

### **Options**

- - C Customer-ID to upload file to.
- E File expiry date.
- -S The Logon string argument sets the Server Logon Information.
- -d File description.
- - f File name to upload to TapeTrack server.

If an argument value starts with the value FI:, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named ACME\_volumes has the content ACME\_\*.\*, specifying FI:/etc/ACME\_volumes will have the same effect as -V ACME.\*.\*. Using FI: to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with \*LIST: then rather than matching the literal value, each record in the file specified as \*LIST:filename will be tested. If one matches the match will succeed.

### **Technical Support**

The TapeTrack Software is commercially supported by a full time help desk staff. If you are experiencing problems or want some advice on how to configure or use the product please see the Accessing Technical Support page.

#### **Exit Statuses**

- 1. **zero** Program has ended successfully.
- non-zero Program has not ended successfully.

## Last update: 2025/01/21 22:07

**Environment** 

#### **Files**

**stdout:** Output Reports. **stderr:** Diagnostic messages.

stdin: Program input.

### **Example**

#### **Command line syntax**

```
<code>TMSS10UploadFile -S user:-password@server -C "US02" -E "2017-12-13" -d "file description" -f "MyFile.txt"</code>
```

#### Output
