

TMSS20NBUEXchangeExtract

Extract EDB's from a NetBackup Image

Synopsis

```
TMSS20NBUEXchangeExtract [-D output directory] [-F file filter] [-M mode] [-i input file]
```

Options

- -D Output Directory
- -F File Filter
- -M Mode: 1=Map, 2=Extract
- -i Input file

If an argument value starts with the value `FI:`, the value for that attribute will be read from the file name specified immediately after it. For example, if a file named `ACME_volumes` has the content `ACME_*. *`, specifying `FI:/etc/ACME_volumes` will have the same effect as `-V ACME. *. *`. Using `FI:` to refer to a file for an attribute value works for all attributes.

If the pattern being matched starts with `*LIST:` then rather than matching the literal value, each record in the file specified as `*LIST:filename` will be tested. If one matches the match will succeed.
