Open TapeTrack Control Panel

The **TapeTrack Control Panel** can be accessed from the File Menu. The **TapeTrack Control Panel** is divided into two tabs: **TapeTrack Servers** and **Advanced Connection Settings**.

TapeTrack Servers

The TapeTrack Servers tab displays active server connections.

Right-Click Operations

There are four options available when right-clicking in the TapeTrack Servers tab.image

- Add: Launches the Server Information window to add additional connections. There are four fields in the Server Information Window.image
 - **Short Name**: How this connection will be displayed in the TapeTrack login window.
 - **Address**: The address of the TapeTrack Server.
 - **IP**: The IP of the Server.
 - **Port**: The port of the TapeTrack Server.
 - Proxy: If set to "true", the HTTP Proxy Settings will need to be set in the "Advanced Connection Settings" tab. See below.
- Delete: Deletes the Server from the list.
- **Properties**: Launches the Server Information window above so that changes can be made to a Server.
- Create Desktop Shortcut: Places a shortcut to this connection on the desktop of your Windows PC.

Advanced Connection Settings

The **Advanced Connection Settings** tab provides additional settings for when a Server uses an HTTP Proxy. It has the following fields:

- Address: The IP Address or Name of the HTTP Proxy Server.
- Port: The TCP/IP Port of the HTTP Proxy Server.
- **User ID**: The User ID for Proxy Authentication (if required).
- Password: The Password for Proxy Authentication (if required).
- Automatically detect HTTP Proxy: Click this button to automatically detect an existing HTTP Proxy Connection.
