

Fully Qualified Barcode

A fully qualified barcode includes the **Customer-ID**, **Media-ID** and **Volume-ID** in a format that can be parsed into those separate values according to the [barcode translation table](#).

For example a fully qualified volume barcode US04.LTO.123456L6, using the [Barcode translation](#) ????.???L6 will parse the values:

- **Customer-ID:** US04
- **Media-ID:** LTO
- **Volume-ID:** 123456L6

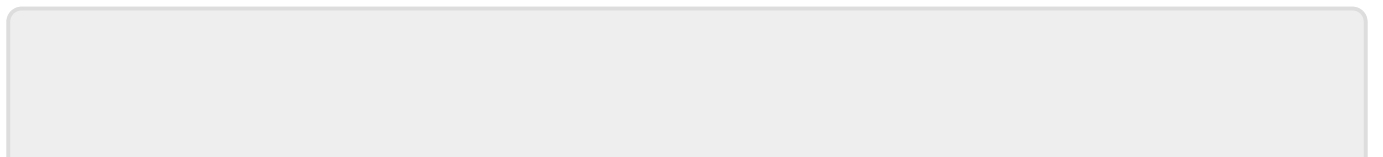

Unqualified Barcode

An unqualified Barcode includes the **Volume-ID** only and no reference to **Customer-ID** or **Media-ID**.
