Zones and Repositories

Overview

The purpose of this section is to explain the concept of Zones and Repositories and how these objects interact to facilitate a flexible storage solution in TapeTrack.

For illustration purposes, rather than discussing a vault we will use the analogy of a restaurant.

Our Restaurant

Our restaurant is called GazillaBytes, and it has 5 rooms. Each of our rooms is named after a color.

We have:

- 1. The Red Room which has seating for 200 people in a configuration of 20 tables each with 10 seats
- 2. The Blue Room which has seating for 200 people in a configuration of 20 tables each with 10 seats.
- 3. The Green Room which has seating for 200 people in a configuration of 20 tables each with 10 seats.
- 4. The Orange Room which has seating for 500 people in a configuration of 25 tables each with 20 seats.
- 5. The Purple Room which has seating for 300 people in a configuration of 30 tables each with 10 seats.

Our bookings

When people book at our restaurant, they book as a company and they book our tables out indefinitely (we serve Fortune 100 companies in this analogy).

- Walmart needs seating for 210 people, so we will give them seats 1 through 210 in the Purple Room.
- Berkshire Hathaway needs seating for 190 people, so we will give them seats 1 through 190 in the Red Room.
- Apple needs seating for 250 people, and don't mind dining in 2 rooms so we give them 200 seats in the Blue Room, seats 191 through 200 in the Red Room, and seats 211 through 250 seats in the Purple Room.
- Exxon Mobile need 400 seats, so we give them seats 1 through 400 in the Orange Room.
- McKesson needs 80 seats, so we give them seats 1 through 80 in the Green Room.
- United Health Group need, 50 seats so we give them seats 81 through 130 in the Green Room.
- CVS Health needs 55 seats so we give them seats 251 through 300 in the Purple Room and seats 131 through 135 in the Green Room.
- General Motors needs 80 seats, so we give them seats 136 through 200 in the Green Room and we give them seats 401 through 415 in the Orange Room.

• AT&T needs 200 seats, so we give them seats 416 through 500 in the Orange Room, and we put 115 of their people on the wait list until we can build a 2nd restaurant.

Seating

Each of the diners is assigned a seat, relative to the start of their reservation, so:

- 1. The first Walmart diner will be seated on the first seat of the first table in the Purple Room.
- 2. The 11th Walmart diner will be seated on the first seat of the second table in the Purple Room.
- 3. The 215th Apple diner will be seated in the 5th seat in the 22nd table of the Purple Room.
- 4. There are 5 diners from both CVS Health and General Motors seated at table 13 in the Green Room.
- 5. There are 5 diners from AT&T and 15 diners from General Motors at table 21 in the Orange Room.

The Analogy

In this analogy each of the rooms represents a Zone, and each of the bookings represents a Repository.

A booking can occupy one or more rooms, and a room can be occupied by one or more reservations.
