

# BackupExec

**BackupExec** is Symantec's (previously Veritas) small business backup solution and depending on the version, allows **Volume** information to be extracted via command line, Windows Power Shell and ODBC.

When **Volumes** are new, they will appear in the Scratch Media Set, but as they are used they are assigned to a specific Media Set. Unlike Symantec's **NetBackup** product, when **Volumes** expire, by default, they are not moved back into the Scratch Media Set.

## The bemcmd command

When BackupExec is installed a number of predefined reports are created. The ID of each predefined report varies from one installation to the next.

## Extracting Volume information using the command line interface

```
bemcmd -o402 -r25 -ft:4 -f:"BE.csv" > "BE-CMD.txt" 2>&1
```

## Extracting Volume information using the Windows Power Shell interface

```
cd "C:\Program Files\Symantec\Backup Exec\Modules\BEMCLI"
import-module BEMCLI

cd "C:\Program Files\TapeTrack\TapeTrack Sync\var"

#
# Get Media list from Backup Exec
#
$MediaList = Get-BEMedia
$Today = Get-Date

#
# Initialize the outout array
#
$Records = @()

ForEach ($Media in $MediaList) {
    $Record = "" | Select-Object CartridgeLabel, MediaSetName, MediaVault,
```

```
RetentionHoursRemaining
  $Record.CartridgeLabel = $Media.Name
  $Record.MediaSetName = $Media.MediaSet
  $Record.MediaVault = $Media.MediaVault
  $Record.RetentionHoursRemaining =
[Int]($Media.OverwriteProtectedUntilDate - $Today).TotalHours
  $Records += $Record
}
```

```
$Records | Export-CSV -notype BE.cs
```
