

Commvault

Commvault software is an enterprise-level data platform that contains modules to back up, restore, archive, replicate, and search data.

Storage Information Report

The Storage Information Report is created via the Commvault GUI and output to CSV format, accessible from the reports tab.

Example Storage Information Report

Storage Information Report

Report generated on 05/06/2014 14:08:02

CommCell ID: F4720

CommCell: cmback01

-- Report Criteria --

#Group By:Bar Code

#Media Status:All

#Media Location:In, Out

#Include: None

#Show Media With Error Only: No

#Show Media With Prevent Export Only: No

#Show Media Retained by Extended Retention Only: No

#Show Media Retained by Basic Retention Only: No

#Include De-configured Clients Only: No

#Libraries:All

#Media Repository:None

#Location:All

#Storage Policy (Copy):All

#Locale:English

#Use None

Synchronization

You will need to install the [TapeTrack Sync software](#) to complete these instructions.

Synchronization with TapeTrack is performed by calling the [TMSS10Sync](#) command line program, along with:

1. The Storage Information CSV report.
2. Command line arguments that instruct the program how to process volumes.
3. A synchronization definition file that instructs the program how to interpret the Storage Information CSV output.

Example Command Line Arguments

```
TMSS10Sync -d default.ttidef -a -S batch:-password@server <
commvaultreport.csv
```

Where:

- -d is the path to the Synchronization Definition File.
- -a tells the program to add new tape volumes if they are encountered.
- -S tells the program what [Server](#) to connect to.
- commvaultreport.csv is the Commvault output.

Example Synchronization Definition

```
SetCSVDelimiter(",");
Extract(VOLUME, 1, 6, 0);
Extract(DESCRIPTION, 5, 50, 0);
Extract(EXPIRYDATE, 7, 10, 0);
Extract(WRITETIME, 13, 20, 0);
```

```
Extract(MOVEDATE, 7, 10, 0);  
AddTranslation(VOLUME, "*", "*L5");  
SetExpiryDateFormat("%m/%d/%Y");  
SetMoveDateFormat("%m/%d/%Y");  
SetWriteTimeFormat("%m/%d/%Y %H:%M:%S");'  
AddString(START, 0, "A1*");  
AddString(EXCLUSION, 0, " *");  
AddString(END, 0, "Notes:*");  
SetLiteral(CUSTOMER, "1002");  
SetLiteral(MEDIA, "LTO");
```
