

Moving Volumes Back To Current Repository Before Confirming At Target repository

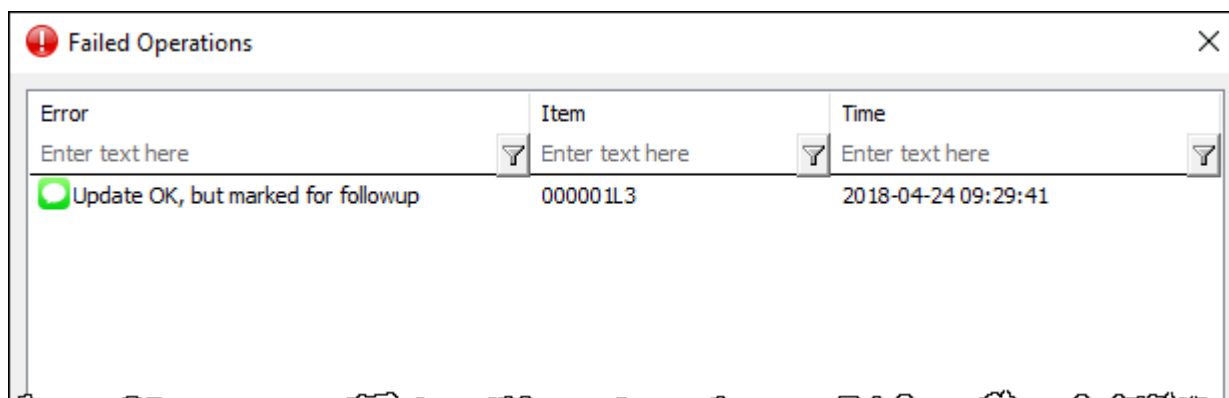

In this example we have a volume 000001L3 moving from the Current repository Library (LIBR) to Target repository Offsite (OFFS), with flags CMnNt (Confirmed, Moving, no slot, Description, Do not assign slot).

The screenshot shows a software interface with a 'Volumes' table. The table has columns: ID, Current Location, Target Location, Flags, Move Time, Due in, Container, and Next Move. There are four rows of data, all starting with volume IDs 000001L3, 000001L5, 000002L5, and 000003L5. Each row shows a move from 'Library' to 'Offsite Vault' with flags 'CMnNt' and a move time of 'D4:21:58:19'. The 'Due in' column is 'Unspecified' and the 'Container' is 'Unassigned'. The 'Next Move' column is 'Permanent'.

| ID | Current Location | Target Location | Flags | Move Time | Due in | Container | Next Move |
|----------|------------------|-----------------|-------|-------------|-------------|------------|-----------|
| 000001L3 | Library | Offsite Vault | CMnNt | S17 | Unspecified | Unassigned | Permanent |
| 000001L5 | Library | Offsite Vault | CMnNt | D4:21:58:19 | Unspecified | Unassigned | Permanent |
| 000002L5 | Library | Offsite Vault | CMnNt | D4:21:58:19 | Unspecified | Unassigned | Permanent |
| 000003L5 | Library | Offsite Vault | CMnNt | D4:21:58:19 | Unspecified | Unassigned | Permanent |

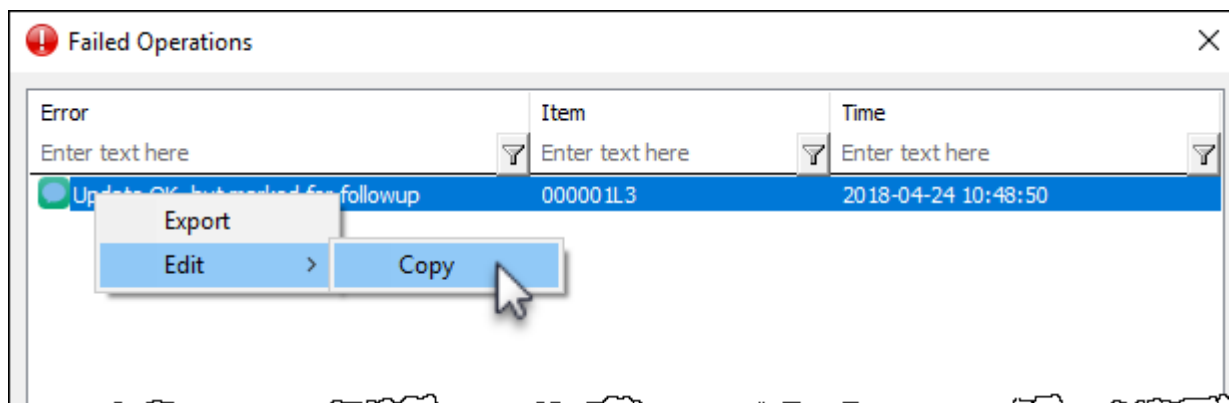

Moving volume 000001L3 back to the repository Library (LIBR) without first confirming it at repository will evoke the **Failed Operations** window, displaying the error **Update OK but marked for followup**, volume ID, date and time.

The screenshot shows a 'Failed Operations' window with a table containing one row of error data. The table has columns: Error, Item, and Time. The error message is 'Update OK, but marked for followup', the item is '000001L3', and the time is '2018-04-24 09:29:41'.

| Error | Item | Time |
|------------------------------------|----------|---------------------|
| Update OK, but marked for followup | 000001L3 | 2018-04-24 09:29:41 |

From this window using the right click menu, volume ID's can be copied to windows clipboard or exported to a file for further investigation at a later date.

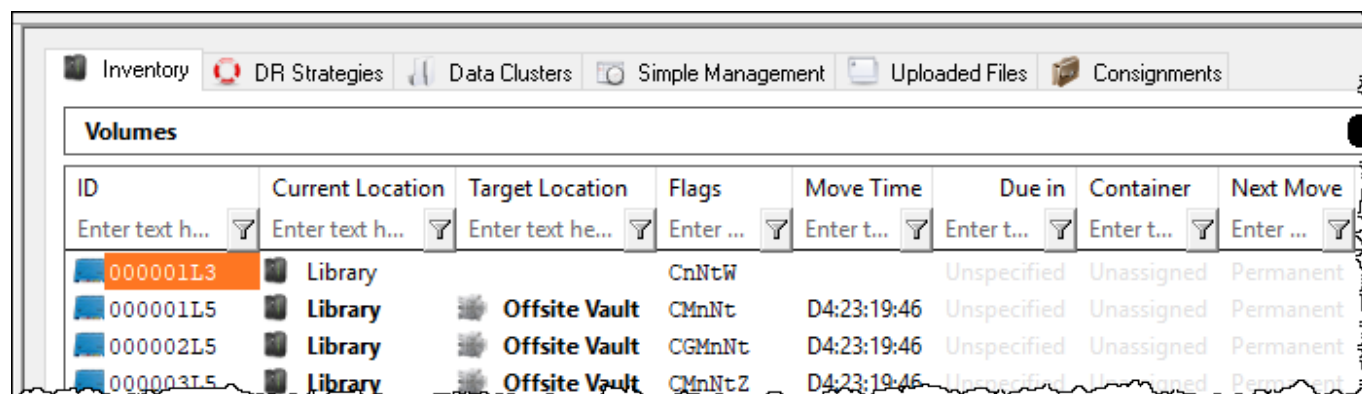

The screenshot shows the 'Failed Operations' window with the same error data as the previous screenshot. A right-click context menu is open over the first row, showing options: 'Export', 'Edit', and 'Copy'. The 'Copy' option is highlighted by the mouse cursor.

| Error | Item | Time |
|------------------------------------|----------|---------------------|
| Update OK, but marked for followup | 000001L3 | 2018-04-24 10:48:50 |

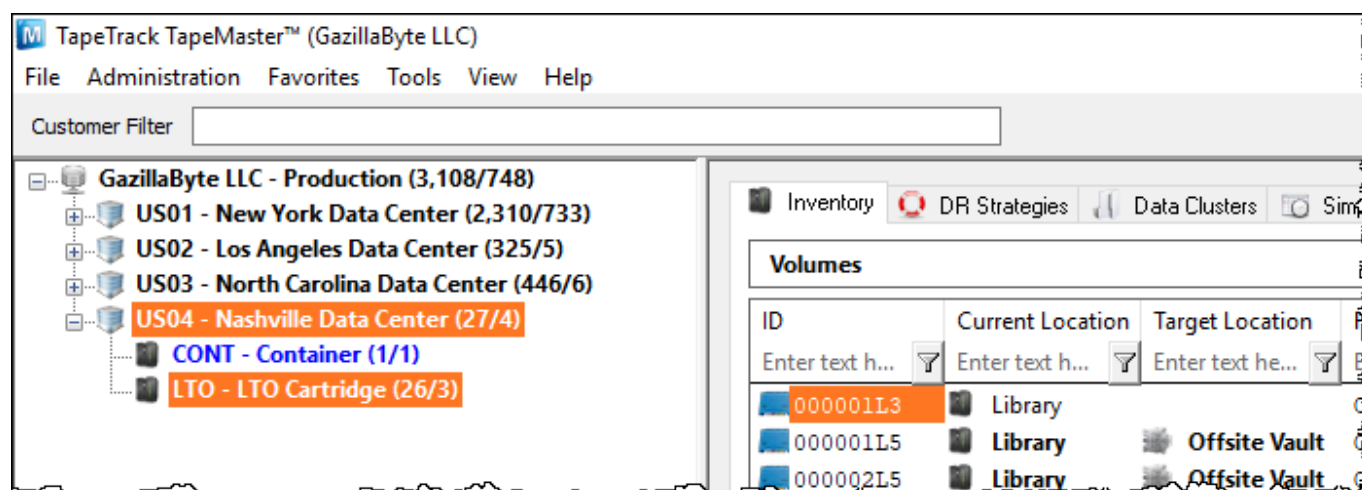

Click OK to close the **Failed Operations** window to continue.

Volume 000001L3 will now have a W (Warning) flag and be highlighted in Orange.

| ID | Current Location | Target Location | Flags | Move Time | Due in | Container | Next Move |
|----------|------------------|-----------------|--------|-------------|-------------|------------|-----------|
| 000001L3 | Library | | CnNtW | | Unspecified | Unassigned | Permanent |
| 000001L5 | Library | Offsite Vault | CMnNt | D4:23:19:46 | Unspecified | Unassigned | Permanent |
| 000002L5 | Library | Offsite Vault | CGMnNt | D4:23:19:46 | Unspecified | Unassigned | Permanent |
| 000003L5 | Library | Offsite Vault | CMnNtZ | D4:23:19:46 | Unspecified | Unassigned | Permanent |

Any volume with a W flag will also change the Customer and Media type to display with the same orange background. This allows the operator to see there are currently volume/s with a warning flag without the need to expand each media type to check for orange volumes.

| ID | Current Location | Target Location |
|----------|------------------|-----------------|
| 000001L3 | Library | |
| 000001L5 | Library | Offsite Vault |
| 000002L5 | Library | Offsite Vault |

The W flag can be removed by either:

- Selecting the volume by clicking on it in the Inventory window and pressing F2.
- Selecting the volume by clicking on it in the Inventory window, right click and select Special Operations → Modify → Flags. From the **Modify Flags** window, expand the Warning menu item and from the drop down menu item Value select **Remove Flag** and click Apply Updates to close the window and remove the W flag.

- Place the volume into a move status to a repository other than the current repository.

When all warning flags have been removed from volumes of a media type the orange highlighting of the Customer and media type will be removed when the customer tree is refreshed. To refresh manually, click in the customer tree window and press F5. If the customer has volumes in other media types with the warning flag, the orange highlighting will remain for those media types and Customer-ID.
