

Adding a Desktop Server Connection

Overview

When using the TapeTrack Desktop Software you will have to have one or more TapeTrack Framework Server entries defined so that you can connect to a server endpoint.

This can also be achieved in the following ways:

1. [Adding a connection to the Configuration File.](#)
2. [Clicking on a URL.](#)
3. [Clicking a Windows Registry File.](#)

When using TapeTrack TapeMaster that was installed as part of the TapeTrack Framework Server installation, an entry for localhost will be automatically added by the installer.

Prerequisites

To configure a server you will need the following information:

1. The server IP address or DSN name.
2. The server port (usually 5000).
3. If you are connecting via a HTTP Proxy:
 - The proxy IP address or DNS Name.
 - The proxy port
 - The proxy user name (if authentication is required)
 - The proxy password (if authentication is required)

Adding a connection interactively

When you run one of the TapeTrack Desktop Programs, you will be prompted to enter a credentials to login.

If you do not have any TapeTrack Framework Servers defined, you will be asked if you want to add one.

If you wish to add an additional server, or delete an existing server, you should click the edit button, which is located next to the Server Selection Dropdown Window.

 **Login**

Connection to this TapeTrack Server is restricted to authorized users only.
Please select your TapeTrack Server and enter your credentials.
All access attempts and successful connections will be recorded.

Server

Local

Select a Server or click the button above to add a new Server.

User or Email

Password

☐ No MD5 (required for Active Directory authentication)

☒ Save User History

OK

Cancel

You will then be presented with the Defined Server List. From this list, right hand click, and select Add from the Context Menu.
