

Using Lite To Move Volumes

While placing Volumes into a move is usually performed by using TapeMaster or a synchronization method, they can be moved using Lite when required.

Example Volume before move, current location in the Library Repository.

The screenshot shows the TapeTrack TapeMaster application window. The menu bar includes File, Administration, Favorites, Tools, View, and Help. A customer filter is present. The left sidebar shows a tree structure with 'GazillaByte - Pro' and 'US01 - US Data Center'. The main area has tabs for Inventory, DR Strategies, Data Clusters, Simple Management, Uploaded Files, and a LTO Cartridge tab (which is selected). A 'Volumes' table is displayed with columns: ID, Current Location, Target Location, Flags, and Description. One item is listed: 'LTO123L4' with 'Library' in the Current Location column. Below the table, it says 'Total Items 1'. A 'Repositories' section shows icons for 'Library', 'Offsite Vault', and 'Scratch Pool'. At the bottom, a status bar indicates 'Connection 127.0.0.1 uses AES 256 bit'.

Sending Volumes

Sending a Volume is the process of placing a Volume into a move status from the Repository you are currently at to that Repository's next Repository. The Next Repository is set in the Repository Options in TapeMaster.

For this example we will be placing a Volume in the Library into a move to the next Repository, the Vault.

Using Lites' [Send function](#), scan the required Volumes to place them into a move to the vault.

The Volumes that were scanned in the Send process will now be in a move to the Next Repository, in this example the vault.

Screenshot of the TapeTrack TapeMaster™ (GazillaByte) software interface:

The window title is "TapeTrack TapeMaster™ (GazillaByte)".

Menu bar: File, Administration, Favorites, Tools, View, Help.

Customer Filter:

Left sidebar: **GazillaByte - Pro** (selected), **US01 - US Da**.

Top navigation bar: Inventory, DR Strategies, Data Clusters, Simple Management, Uploaded Files, **LTO Cartridge**.

Volumes table:

| ID | Current Location | Target Location | Flags | Description |
|----------|------------------|-----------------|-------|-----------------|
| LTO123L4 | Library | Offsite Vault | CMn | Enter text here |

Total Items: 1

Repositories section:

- Library (Icon: tape)
- Offsite Vault (Icon: vault)
- Scratch Pool (Icon: recycle bin)

Bottom status bar: Connection 127.0.0.1 uses AES 256 bit

Volumes, using [Lite Scan Out](#) can now be scanned out.
