

Dynamic Attribute Lists

Dynamic Attribute Lists provide a flexible selection mechanism by automatically populating available options based on the Volumes previously entered values.

This approach maintains consistency across Attribute Values by encouraging reuse of existing entries—minimizing spelling variations (e.g. Removed vs removed) and streamlining data entry.

Unlike fixed lists, dynamic lists also support the addition of new values as needed, ensuring adaptability while preserving uniformity and reducing repetitive typing.

Creating A Dynamic Attribute

Right click on the required Customer-ID and select **Properties**

Expand the first available Extended Attribute, fill in the required fields:

- Label: Identifiable description eg Pool
- Type: Dynamic
- Featured: True displays the attribute in the [Custoer Tree Attribute View](#)

Attribute	Value
Extended Attribute 1	
Label	Pool
Type	Dynamic List
Required	False
Hidden	False
Hidden	False
Featured	False
Extended Attribute 2	
Extended Attribute 3	
Extended Attribute 4	
Extended Attribute 5	
Extended Attribute 6	
Extended Attribute 7	
Extended Attribute 8	
Extended Attribute 9	
Extended Attribute 10	
Extended Attribute 11	
Extended Attribute 12	

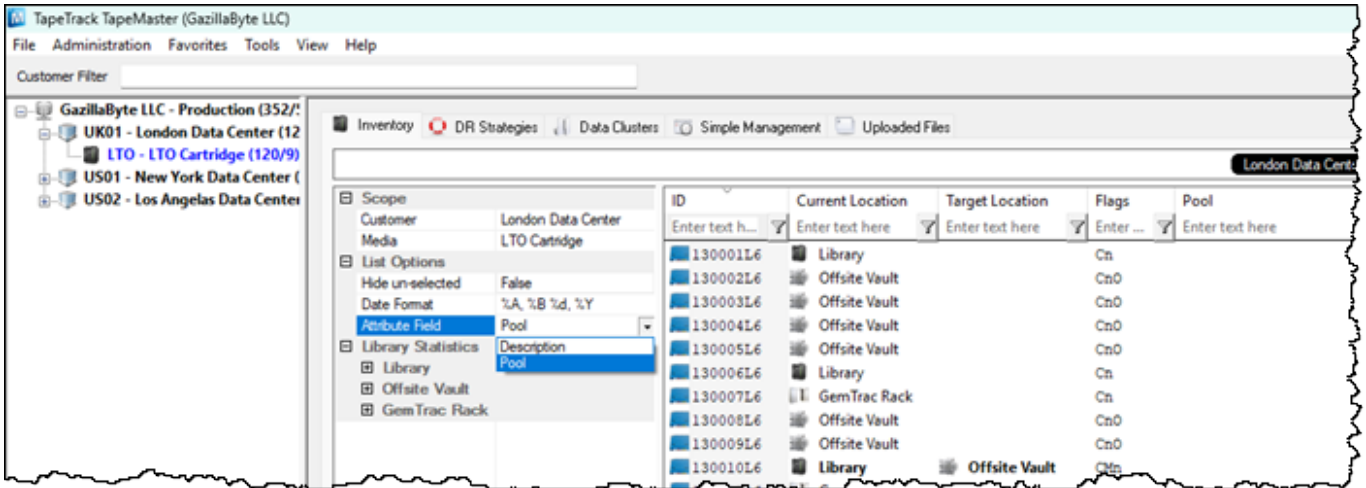

Reset All Values Copy from Customer

Save Cancel Help

Click Save to add the new attribute.

Display Dynamic Attribute

Click in the Customer Tree window and press F5 on your keyboard to refresh the data. Via the [Volume List Properties](#) window, select the Attribute via the Attribute Field dropdown to display it in place of the Description field in the Inventory window.

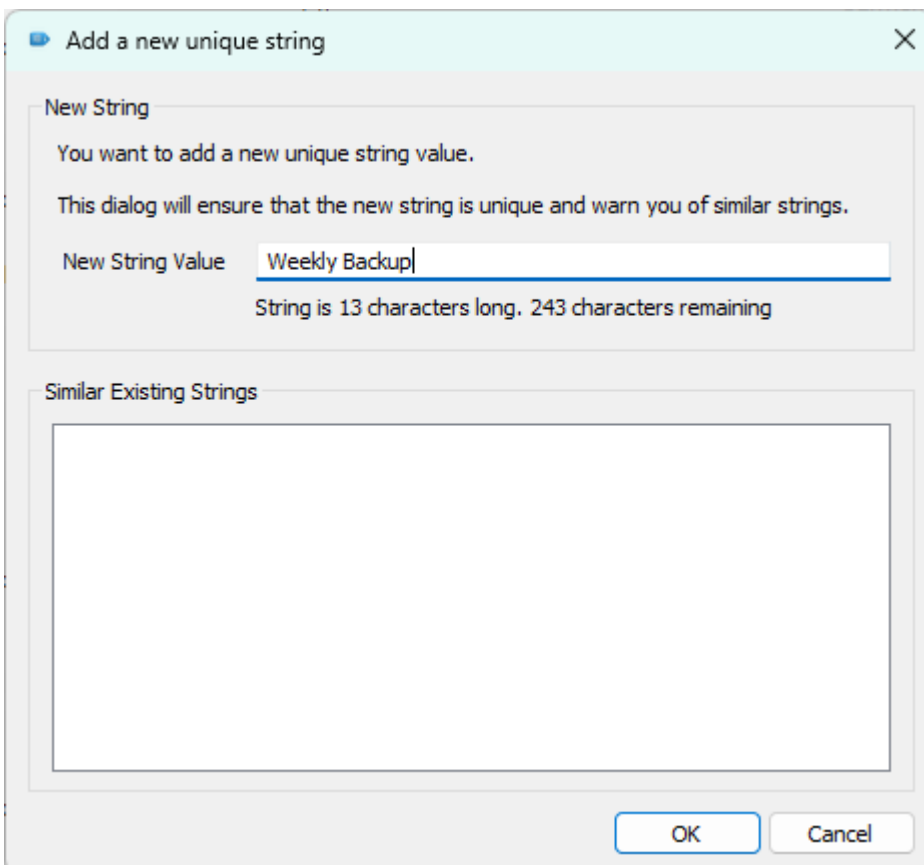

Dynamic List Values

When the dynamic list is first added, it has no selectable values other than Add New Value. This is because the list is populated with values as they are added to the Volumes.

To add new values to a Volume, in the Inventory window, select the dropdown from the required Volume and select Add a new value to open the Add a new unique string window.

Enter the new string in the New String Value and click OK to add the value. As you add more values, the Similar Existing Strings window displays any similar strings that may have already been entered, eg if you are adding weekly and someone has already added Weekly, this will be displayed. This function helps avoid adding similar strings that should be only one value.
