

addtranslation2fromfile

## AddTranslation2FromFile

Translate the value of a field based upon the value of another field, where the other field value can be loaded multiple times using the contents of a file.

### Phase

This instruction is used by the TapeTrack Import Engine.

### Syntax

**AddTranslation2FromFile**(*field*, *field2*, *filterfile*, *translation*); *string field*;  
*string field2*;  
*string filterfile*;  
*string translation*;

field	The field to be translated.
field2	The field to be compared.
filterfile	
translation	The new value of the field. This can either be a new literal value, or the original value with a prefix or suffix. To represent the current value use an asterisk ("*").

 See the notes section for [Add Translation](#).

Examples Example A.26. AddTranslation2FromFile: Append L3 to each VOLUME field if the value of the MEDIA matches a pattern within a record of c:\data\LTO3Volumes.txt.

AddTranslation2FromFile(VOLUME, MEDIA, "c:\data\LTO3Volumes.txt", "\*L3");
