

AddRepositoryOnWriteTime
Extract the WRITEDATE from column 10, length 20.
Extract(WRITEDATE, 10, 20, 0);

Set a Repository value based upon a range of Write Times.
#Set the WRITEDATE format.
SetWriteDateFormat("%%H:%%M:%%S %%d/%%m/%%Y");

Phase
Extract the DESCRIPTION from column 11, length 100.
Extract(DESCRIPTION, 11, 100, 0);
This instruction is used by the TapeTrack Synchronization Engine.
If the DESCRIPTION contains YEARLY and the WRITEDATE is within one day
move the Volume to LIBR and give it a one day MOVEDATE.
Special Considerations
AddRepositoryOnWriteTime(DESCRIPTION, "*YEARLY*", "0:1", "LIBR", "0:1");

If the DESCRIPTION contains YEARLY and the WRITEDATE is within one year
move the Volume to OFFS and give it a one year MOVEDATE.
AddRepositoryOnWriteTime(DESCRIPTION, "*YEARLY*", "0:0:1", "OFFS", "0:1:1");

 This instruction will not be invoked by the Synchronization Engine if a matching AddRepositoryOnMoveDate entry has been used to change the repository.

Syntax
From:
<https://rtfm.tapetrack.com/> - **TapeTrack Documentation**

AddRepositoryOnWriteTime(field, filter, time, target, movedate); string field;
string filter;
string time;
string target;
string movedate;

Last update: **2025/01/21 22:07**

field	A field for comparison.
filter	A filter to compare against.
time	Number of hours, days, months and years from the Write Date.
target	The Target Repository.
movedate	Number of hours, days, months and years from the Write Date to set the Move Date.

Example

Set the Repository based upon time from Write Date.**
