ddRepositoryOnWriteTime 10, length 20.

Extract(WRITEDATE, 10, 20, 0);

Set a Repository value based upon a range of Write Times. #Set the WRITEDATE format.

SetWriteDateFormat("%H:%M:%%S %%d/%m/%%Y");

Phase

Extract the DESCRIPTION from column 11, length 100.

Extract(DESCRIPTION, 11, 100, 0);

This instruction is used by the TapeTrack Synchronization Engine.

If the DESCRIPTION contains YEARLY and the WRITEDATE is within one day move the Volume to LIBR and give it a one day MOVEDATE.

Special Considerations
AddrepositoryOnWriteTime(DESCRIPTION, "*YEARLY*", "0:1", "LIBR", "0:1");

If the DESCRIPTION contains YEARLY and the WRITEDATE is within one year move the Masumetrtetion will and to show the beau prense of the Masumetrian Engine if a matching AddRepositannenditiatediameverskerieripals beentendelike changedalkerioristes, "0:1:1");

Syntax From:

https://rtfm.tapetrack.com/ - TapeTrack Documentation

AddRepositoryOnWriteTime(field, filter, time, target, movedate); string field;

5tfittֆ։///Ptfm.tapetrack.com/engine/sync/addrepositoryonwritetime?rev=153990764։ string time;

strand #900te; 2025/01/21 22:07

strir

string mo	string <i>movedate;</i>	
field	A field for comparison.	
filter	A filter to compare against.	
time	Number of hours, days, months and years from the Write Date.	
target	The Target Repository.	

movedate Number of hours, days, months and years from the Write Date to set the Move Date.

Example

Set the Repository based upon time from Write Date.**
