

# TapeTrack for iPhone

## Sign-in Settings

You can sign-in to the iPhone TapeTrack app using either a 4 digit Passcode, or your iPhone's Touch-ID sensor (if supported).

In the event you have forgotten your Passcode, you can reset the pin using the Reset PIN button on the Sign-in Settings screen. If you select this option your adapter settings (including credentials) will be erased. Please note that as the adapter data is hosted remotely this will not be erased.

## List Option

The List screen will display your Libraries and their contents.

## Scan Option

There are 4 reasons why somebody would want to scan a tape with this App, and it is often different people who are scanning.

### Move

Scan to Move: This is done by the tape owner who wants to tell the software that certain tapes have to move from one location to another. This will place the tape in a "move status".

### Pickup

This is done by a courier. The purpose of this is so that they know they have picked up the right tapes. If an unexpected tape is picked up or a tape is missing from the expected list there will be a warning displayed on the screen. Once this step has been completed the tapes will be marked as "picked-up".

### Confirm

Once the tapes are confirmed at their location it will tell the system that the tapes have been returned. This takes the tapes out of a "move status".

### Audit

# Log

The Log screen will show all activity from the current session.
