# Overview

The TapeTrack Slack App allows you to query tape libraries and move tapes from one location to another by all from within slack.

# Prerequisites

1. A Slack Account
2. Open Data Protection API (ODPAPI) Adapter for TapeTrack or URL of an existing Adapter.
3. TapeTrack credentials.

# Connecting the App

To install the App simply click the App icon on the slack app directory.

# App Commands

## Adapters

Before you can use the TapeTrack slack App you must first add at least one ODPAPI Adapter.

### Adding an Adapter

#### Syntax

```
/tapetrack adapter add name adapter_url
```

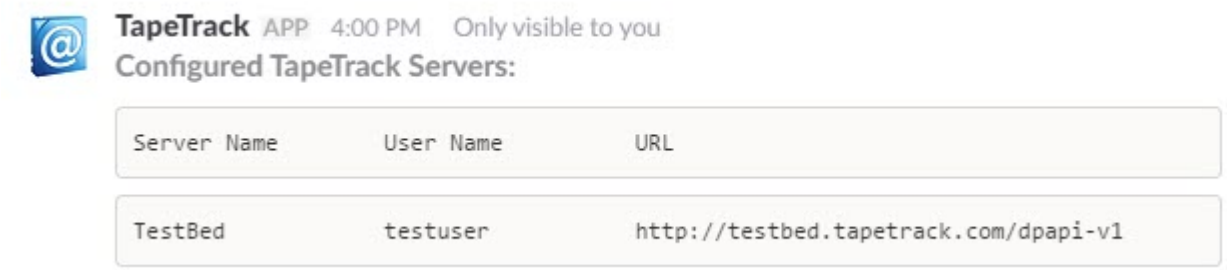

#### Example

```
/tapetrack adapter add TestBed
testuser:testuser@testbed.tapetrack.com/dpapi-v1
```

### Listing Adapters

#### Syntax

```
/tapetrack adapter list
```

### Deleting an Adapter

#### Syntax

```
/tapetrack adapter delete name
```

#### Example

```
/tapetrack adapter delete TestBed
```

## Libraries

### Listing Libraries

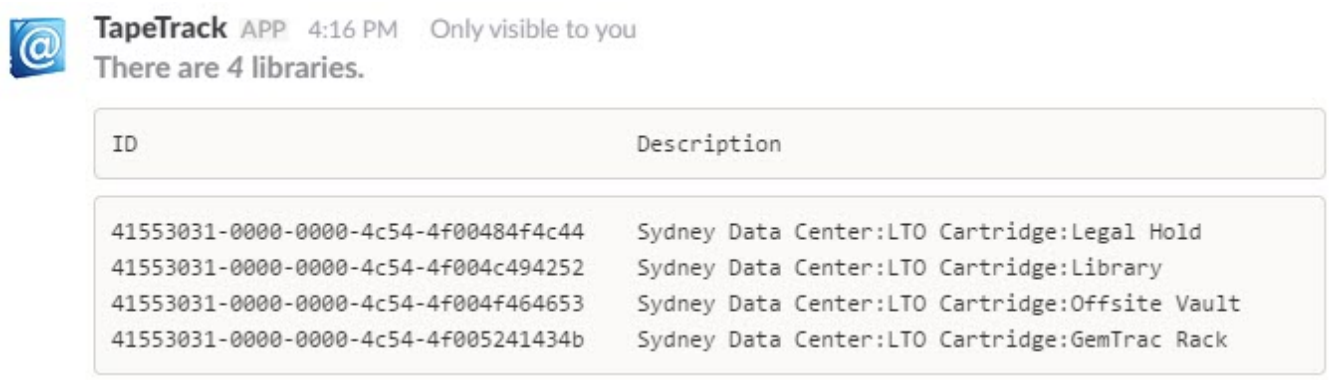

When listing libraries you can either query one of the adapters by name, or use a wildcard to match the closest adapter.

### Syntax

```
/tapetrack name library list
```

### Example

```
/tapetrack * library list
```

In the returned list of accessible libraries you will get a library UUID along with the library description. The library UUID will be used to access that library and the tapes within it going forward.

## Libraries Information

### Syntax

```
/tapetrack name library info library_uuid
```

### Example

```
/tapetrack name library info library_uuid
```
