

# VolumeAuto: Setting Move Dates

**VolumeAuto** uses Volume filters and date values from `VolumeAuto.txt` that can be employed to override default return dates and descriptions for matched **Volumes**.

The VolumeAuto process can be useful for setting next move dates of selected **Volumes** where the retention dates don't follow a regular schedule that could be handled by Simple Management rules.

The VolumeAuto process also has the advantage of being able to automatically set next move dates using Lite as opposed to having Simple Management rules that require access to TapeMaster.

`VolumeAuto.txt` can be found in the Lite install directory, default location `C:\Program Files\TapeTrack\TapeTrack Lite\VolumeAuto.txt`.

```
VolumeAuto.txt - Notepad
File Edit Format View Help
#
# Sample VolumeAuto File
#
# This file contains values that will override the default return date for specific volumes.
#
# The file is in CSV Format, and contains the following fields:
#
# (1) Volume Filter in Customer.Media.Volume Format
# (2) Move Date in the following formats:
#     (2.1) YYYY-MM-DD
#     (2.2) *+n (where * is today, and n is an integer days offset)
#     (2.3) Y+n (where Y is the first day of the next year, and n is an integer years offset)
#     (2.4) y+n (where y is the last day of the next year, and n is an integer years offset)
#     (2.5) M+n (where M is the first day of the next month, and n is an integer months offset)
#     (2.6) m+n (where m is the last day of the next month, and n is an integer months offset)
# (3) Description
#
# If a volume filter is matched, and the date value is in the past then the search continues.
#
# Examples:|
#
# ACME.DL.*,*+10,Test Description <- Today + 10 days
# *.DL.*,Y+7,Test Description <- First of next year, + 7 years
# ACME.DL.*,2010-12-01,Test Description <- First of December 2010
#
```

## File Format

The file is in CSV Format, and contains the following fields:

- Volume Filter in Customer.Media.Volume Format
- Move Date in the following formats:
  - YYYY-MM-DD
  - \*+n (where \* is today, and n is an integer days offset)
  - Y+n (where Y is the first day of the next year, and n is an integer years offset)
  - y+n (where y is the last day of the next year, and n is an integer years offset)
  - M+n (where M is the first day of the next month, and n is an integer months offset)
  - m+n (where m is the last day of the next month, and n is an integer months offset)
- Description

## Function

When using the Send function in Lite, **Volumes** will be compared to the filters contained in the VolumeAuto file.

- If a matching filter is found the date will be evaluated.
  - if the date value is in the past the search will continue.
  - If the date value is in the future and is past the default date value, the move date will be overridden with the date value.
- If no matching filter is found the default move date will be applied to the Volume.

## Examples

All Volumes from:

- Customer: ACME
- Media type: LTO
- Move date: Today + 10 days
- New Description: Test Description

```
ACME.LTO.*,*+10,Test Description
```

All Volumes from:

- Customer: all
- Media type: LTO
- Move date: First of next year, + 7 years
- New Description: Test Description

```
*.LTO.*,Y+7,Test Description
```

All Volumes from:

- Customer: ACME
- Media type: LTO
- Move date: First of December 2010
- New Description: Test Description

```
ACME.LTO.*,2010-12-01,Test Description
```

Volume 100122L6:

- Customer: ACME
- Media type: LTO

- Move date: Listed set of dates
- New Description: Test Description

```
ACME.LT0.100122L6,2019-01-04,Test Description
ACME.LT0.100122L6,2019-01-11,Test Description
ACME.LT0.100122L6,2019-01-18,Test Description
ACME.LT0.100122L6,2019-01-25,Test Description
ACME.LT0.100122L6,2019-02-01,Test Description
ACME.LT0.100122L6,2019-02-08,Test Description
ACME.LT0.100122L6,2019-02-15,Test Description
```
