Creating A Zone

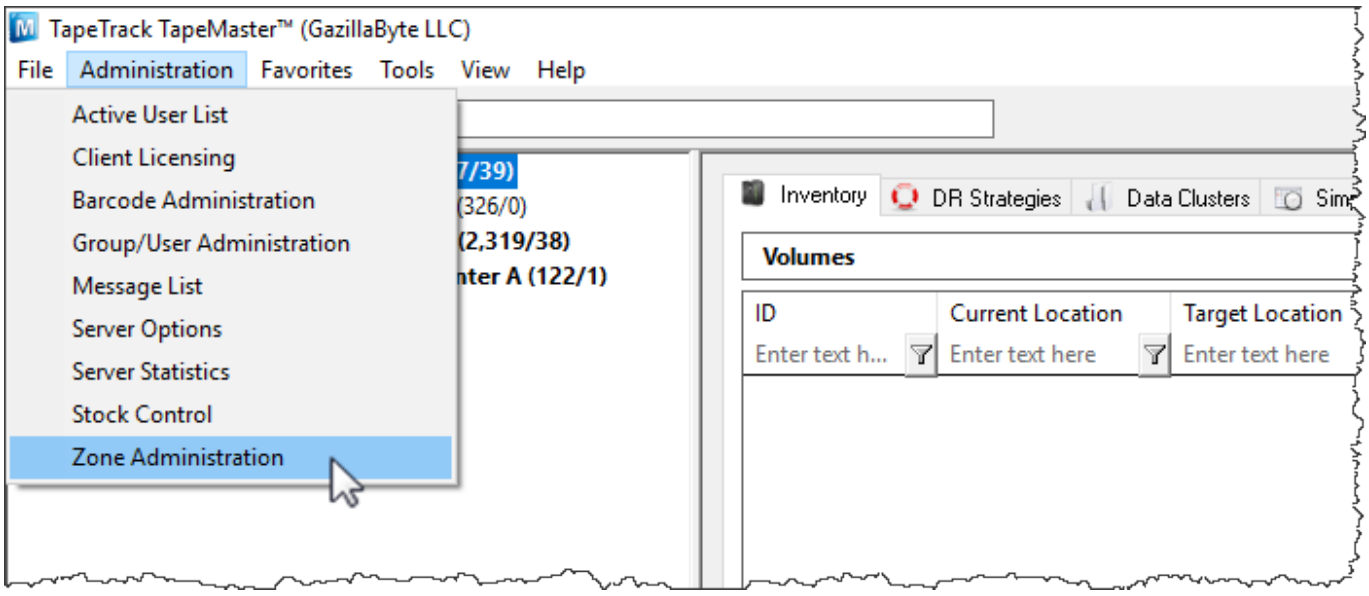

Overview

A Zone is a TapeTrack Object which represents a physical storage location. Once created a Zone is then mapped to one of more Repositories to facilitate one or more contiguous physical storage locations for a given virtual location.

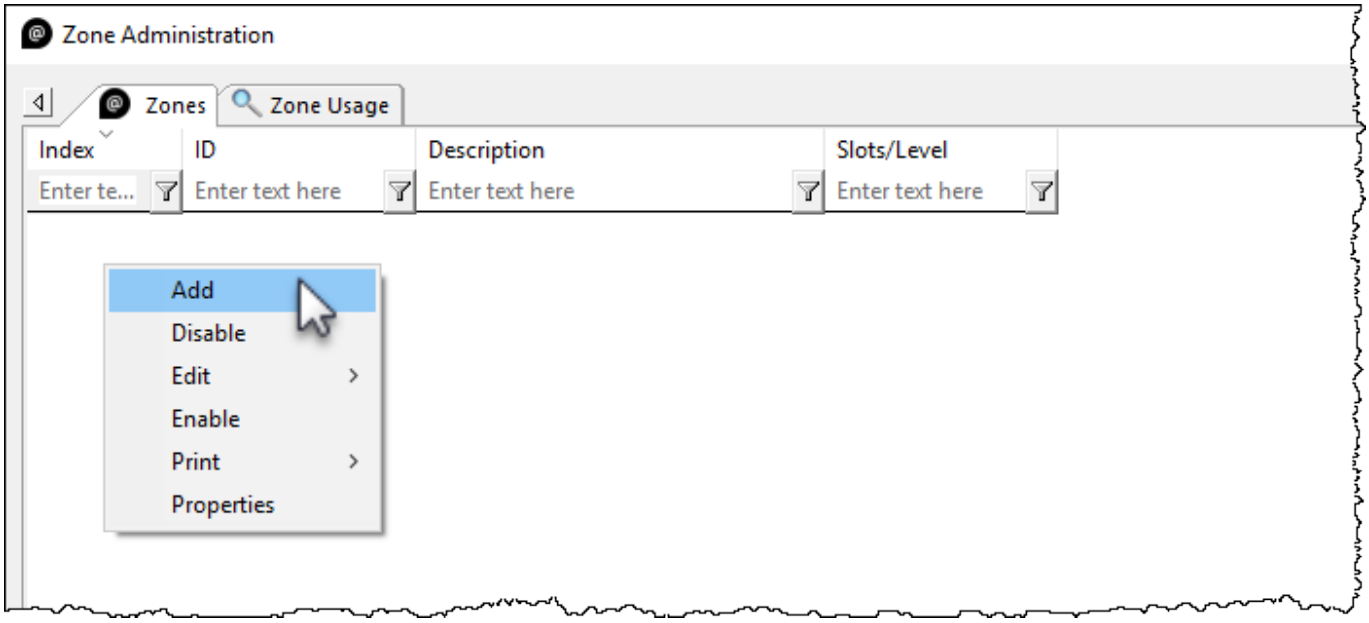

This section will explain to you how to create a Zone, and will also explain in detail how to set each of the Zone Properties.

Creating A Zone

From the Main Menu, select `Administration→Zone Administration`.

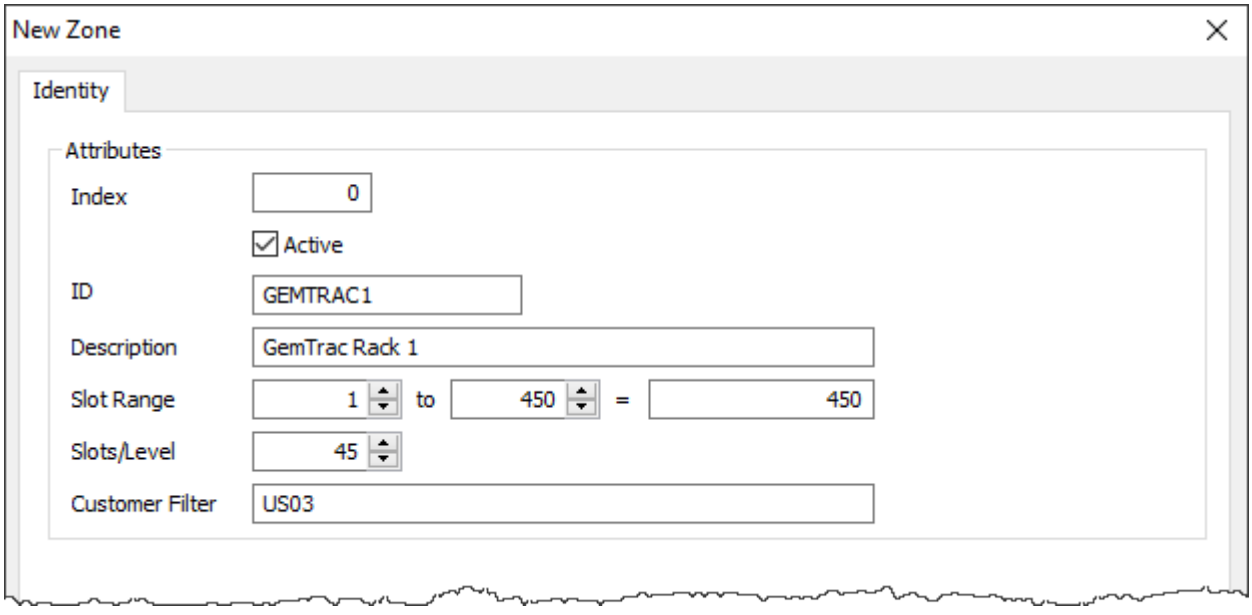

Right click in the main window and select Add.

In the `Identity` tab add:

- Zone ID
- Zone description
- Total number of slots
- Number of slots per row
- Customer filter (optional)

Click Save.

Once created zones can be applied to a repository

Slotting

Slotting can be done manually or automatically.
