Built In Repositories

TapeMaster has 3 built in Repositories, which are hidden by default.

To display the hidden Repositories, navigate to the Options tab in the Media Type Properties Window and set Show Built In Repositories to **true**. The Repositories **Initial**, **Next** and **Home** will be displayed in the Repository window.

Initial Repository	Library	Next Repository	Offsite Vault	Home Repository	

Built-In Repositories often do not exist as locations, but they use settings in the Options Tab of the Volume Properties Window to dictate movements.

Built In Repository Functions

Initial Repository

If No Selection is set in the Default Repository field in the Media Type Properties Window's Options Tab, newly added Volumes will be allocated to the Initial Repositories.

### **Home Repository**

Dragging and dropping volumes to the Home Repository places them into a move status to the Repository set as the Home Repository in the Volume Properties Window Options tab.

An example for using this function would be volumes returning from offsite storage back on-site and needing to be stored in different racks (repositories). Having the required rack set for each volume allows you to drag and drop all the volumes on the Home Repository and letting TapeTrack sort which repository each of the volumes belong in, saving you having to separate each group of volumes for each repository manually.

A volume's Home Repository can be set in the Volume Properties Window Options Tab.
