

# Customer Filter

The Customer Filter allows you to filter the customer tree to selectively display only customer ID's that match the filter criteria.

## Customer Filter String

To filter customer tree insert [filter string](#) in the **Customer Filter** box.

Click on the Customer Tree and press F5 to update display.

If no customers are displayed this means that there are no customer ID's that match the [filter string](#).

Customers can also be searched by customer description rather than Customer ID by using the **Find Customer** function.
