

Customer Filter

The Customer Filter allows you to [filter](#) the [Customer Tree](#) to selectively display only [Customer-ID's](#) that match the [filter criteria](#).

Customer Filter String

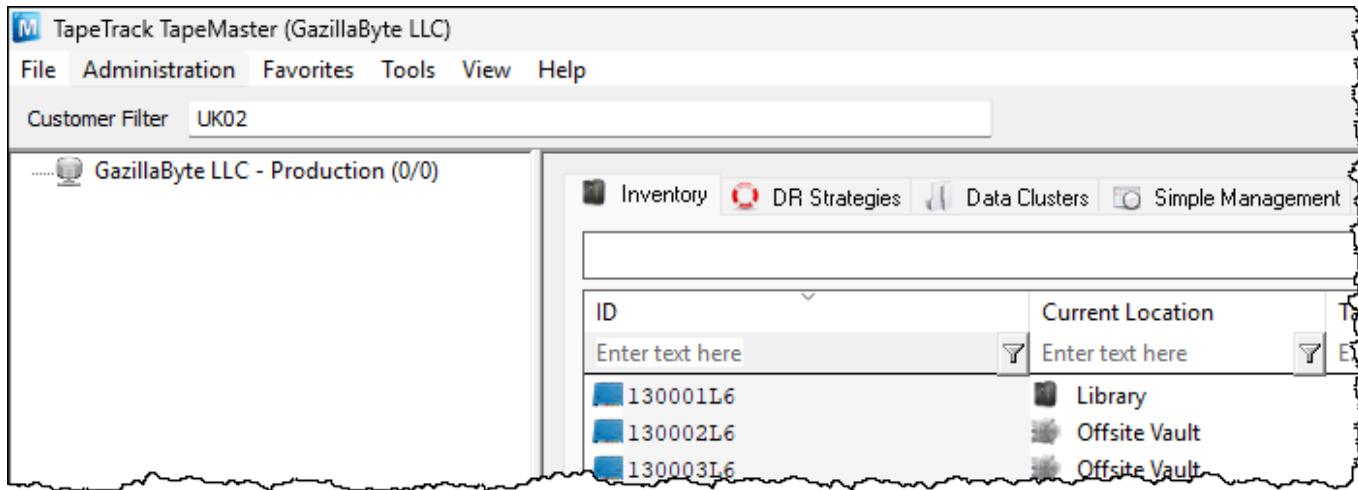

To filter [Customer Tree](#) insert a [filter string](#) in the [Customer Filter](#) field.

Click on the [Customer Tree](#) and press F5 on your keyboard to update display.

If no [Customers](#) are displayed this means that there are no [Customer-ID's](#) that match the [filter string](#).

The screenshot shows the TapeTrack TapeMaster software interface. The title bar reads "TapeTrack TapeMaster (GazillaByte LLC)". The menu bar includes "File", "Administration", "Favorites", "Tools", "View", and "Help". A "Customer Filter" dropdown is set to "UK02". The main window displays a tree view under "GazillaByte LLC - Production (0/0)". On the right, a search interface is visible with tabs for "Inventory", "DR Strategies", "Data Clusters", and "Simple Management". The "Inventory" tab is selected. A search table has "ID" as the header for the first column and "Current Location" as the header for the second column. The table contains three rows: "130001L6" (Library), "130002L6" (Offsite Vault), and "130003L6" (Offsite Vault). There are search filters for both columns.

To return to a full [Customer Tree](#) display, delete the filter string in the Customer Filter field, click on the [Customer Tree](#) and press F5 on your keyboard.

Customers can also be searched by Customer Description rather than [Customer-ID](#) by using the [Find Customer](#) function.
