# **Generation Dispersement Table**

The Generation Dispersement function displays a table of selected volumes based on their generation (ie. LTO 1, LTO 2) and current scratch (Z flag) status.

### **View Generation Dispersement Table**

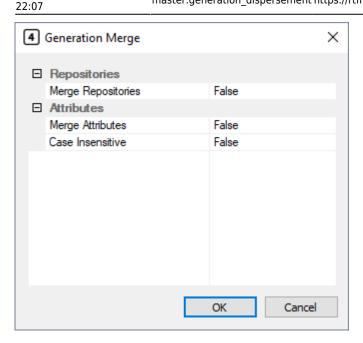

Select volumes to be included in table by either right click in the volume window and Select  $\rightarrow$  All or Ctrl + A to select all, or range select by shift + click and/or Ctrl + click.

Right-click highlighted volumes and select View → Generation Dispersement Table.

Select from the popup whether you want the results to merge repositories and/or attributes as well as whether or not to ignore or include case sensitivity.

## **Merge Repositories in Table Results**

Setting merge repositories to true will display results in table the selected volume quantities in the Generation Dispersement Table separated by attribute value, scratch status and volume generation (both scratch and non scratch).

#### **Include Currently Set Attributes In Table**

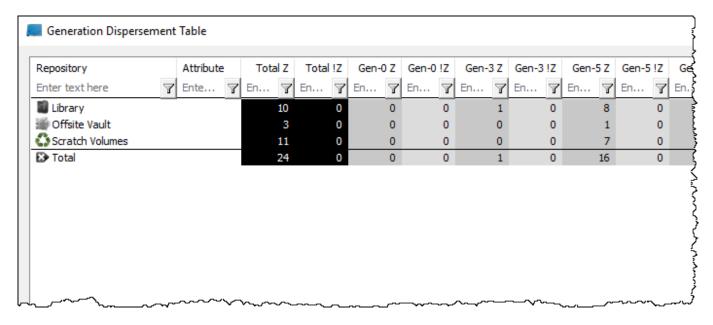

Selecting Yes to include the currently set attribute will display the selected volume quantities in the Generation Dispersement Table separated by current repository, attribute value, scratch status and volume generation (both scratch and non scratch).

### **Exclude Currently Set Attributes In Table**

Selecting No to include the currently set attribute will display the selected volume quantities in the **Generation Dispersement Table** separated by current repository, scratch status and volume generation.

Close the report by clicking the X at the top right corner.
