

# Generation Dispersement Table

The Generation Dispersement function displays a table of selected volumes based on their generation (ie. LTO 1, LTO 2) and current scratch (Z flag) status.

## View Generation Dispersement Table

Select volumes to be included in table by either right click in the volume window and Select → All or Ctrl + A to select all, or range select by shift + click and/or Ctrl + click.

Right-click highlighted volumes and select View → Generation Dispersement Table.

Select from the popup whether you want the results to merge repositories and/or attributes as well as whether or not to ignore or include case sensitivity.

## Merge Repositories in Table Results

Setting merge repositories to true will display results in table the selected volume quantities in the **Generation Dispersement Table** separated by attribute value, scratch status and volume generation (both scratch and non scratch).
