## Library Health

The Library Health field in the Volume List Properties Window displays a score out of 100, measuring the health of the selected Customer's Media Type.

## Problems

The following list of items will deduct from a perfect Library Health Score:

- One or more Volumes have received an overdue Flag for being overdue at their Current Repository.
- There are no Volumes in a Repository that is set to offsite in the Options Tab of the Repository

Properties Window or it has been a number of days since Volumes have been sent to an offsite Repository.

- Disaster Recovery Strategies are either non-existent or have not been created recently.
- Disaster Recovery Strategies have errors, meaning that Volumes necessary for a restore are not in a Repository that is set to offsite in the Options Tab of the Repository Properties Window.
- Volumes have received an audit Flag due to a failed physical audit.
- A sync with a Backup System has never been initiated through TapeTrack Sync or has not been initiated in several days.

## **Library Statistics**

The Library Statistics display, on a per Repository basis, the total Volumes, number of Volumes moving in and out, minimum of Scratch Volumes required and the number of Scratch Volumes present.

## **Excluding Media**

Media Types can be excluded from Health Check Statistics through Media Properties Option tab.
