

# Adding and Maintaining Media Types

Media is usually separated in TapeTrack according to the Media Type (eg LTO, CD or 359x). Media generations, such as LTO3 and LTO4, are traditionally grouped together. Media types can be added, or removed, as required for each Customer.

## Adding Media Types

To add a Media Type, right-click a Customer and select Add Media Type.

## Identity Tab

This will launch a Edit New Media window. The first tab on the Edit New Media window is the Identity tab. The Identity tab requires the input of a Media-ID (up to four alphanumeric characters) and a Media Type Description (up to twenty alphanumeric characters). While the Media Description can be edited at any time, the Media-ID is permanent and cannot be changed once created.

### Options Tab

The provides options for the new Media Type. Set the option values required.

- **Hide Media Type** when set to true removes the **Media** Type from view in the Customer Tree.
- **Internal Media** Type has an internal purpose and should not be displayed to all applications.
- **Maximum Volumes** allowed. 0 = unlimited.
- **Maximum Repositories** allowed. 0 = unlimited.
- **Allowable Volume-ID's** if set, restricts the allowable **Volume-ID** formats for this **Customer**.

- **Default Media Type** This [Media](#) type is the default type when none can be determined.
- **Auto Simple Management** adds new [Volume](#) with the Simple Management Option.
- **Auto Container** automatically adds new [Volumes](#) as Containers.
- **Stock Controlled** requires all new [Volumes](#) to have a Stock Control Type.
- **Auto Stock Selection** selects a Stock Type for new [Volumes](#) automatically.
- **Relaxed Barcode Matching** attempts to match a scanned Barcode with L|T|J suffix when not found.
- **No Move-back Warning** stops a warning flag (W) being added to a [Volume](#) if it moves back to its Current Repository before being confirmed at it's Target Repository.
- **Lock Volumes** stops updates from occurring to [Volume](#) data.
- **No HealthCheck** excludes media from Health Check statistics.
- **Show Built In Repositories** includes built-in Repositories in displayed list.
- **Remove Barcode Suffix** removes suffix from scanned Barcode before processing.
- **Barcodes use Modulo43** will be reviewed for Modulo 43 checksum digits.
- **Default Repository** allocates the default location for new [Volumes](#).

Click Save

The next prompt will be to add the relevant [Repositories](#) for the [Media](#). [Repositories](#) can be added by editing the fields (if required) and changing the Create property to **True**.

You can also [Create Repositories](#) manually at any time new ones are required.

## Deleting Media Types

Right-click a Media Type in the Customer Tree. Select Delete Media Type.

 Media Types that contain [Repositories](#) and/or [Volumes](#) cannot be deleted until dependencies are removed.

Further information about removing [Media](#) type dependencies can be found at [Deleting Repositories](#) and [Deleting Volumes](#).

## Modifying

Right-click a Media Type in the **customer tree** and select Properties.

From the **Edit Media** window, you can modify the description, change the [media options](#) and add volumes using the Volume-ID building tab. See the [Volume-ID Building page](#) for more details on how to use this function.

Edit Media: LTO Cartridge (102/22)
