

Scanning Volumes To A Container

Volumes can be scanned or assigned to a container directly via the container's properties window.

From the inventory window open the required container's properties tab by either right-clicking the required container and selecting Properties or double clicking.

Open the Container Contents tab, right-click and select Scan To Assign Volume to open the scan in window.

Scan in the volumes to be assigned to the container using your preferred [scanning method](#).

If scanning unqualified barcodes (ie 123456L5 not US01.LTO.123456L5) you will need to make sure the customer ID and Media-ID are correct in the defaults of the scan window for the volumes.

Barcode	Customer	Media Type	Volume-ID	Message	Count
000015L5	North Carolina Data Center	LTO Cartridge	000015L5	Request OK	1
000014L5	North Carolina Data Center	LTO Cartridge	000014L5	Request OK	1
000012L5	North Carolina Data Center	LTO Cartridge	000012L5	Request OK	1
000011L5	North Carolina Data Center	LTO Cartridge	000011L5	Request OK	1

Close the scan window when finished and click Save to apply volume assignment and close the container property window.
