

Paste

The paste function will use whatever information has been added to the clipboard using the copy function and added it to the selected field(s) or Volume(s).

There are four types of paste functions:

- **Attributes:** Selecting **Attributes** will paste the clipboard's current value to the selected **Volume(s)** currently displayed Attribute. To change which Attribute is displayed refer to **Volume List Properties**.
- **Select in list:** Selecting **Select in list** will select, via Attribute or Volume-ID, based off the values currently in the clipboard.
- **Volumes:** Selecting **Volumes** will add new **Volume(s)** with the same **Volume-ID(s)** as whatever was copied using the Copy → Volumes function. If the same Volume-ID already exists in that **Customer**, a warning message will be displayed.
- **Value by ID**
