

Volume Current Location

A **Volumes** Current Location is the last **Repository** the **Volume** was confirmed at. If the Current Location matches the Target Location it is also the physical location the **Volume** should be at.

If **Slotting** is enabled the Current Location will include the **Slot** allocation details as well.

The Virtual Location panel displays:

- **Repository**.
- **Slot** Number allocation.

If slotting is not enabled, or no zones mapped to the repository, slot number field will not be displayed.

The **Absolute Location** displays:

- The Zone-ID.

- Level location.
- [Slot](#) location

The **Absolute Location** is a physical representation of where the slot is located based on racking parameters, such as number or drawers/shelves and slots per drawer/shelf, to enable users to easily locate the Current Location. If Slotting is not enabled, or no Zones mapped to the Repository, Zone-ID will be blank, level and slot will display as zero.

Expanding the lower section **Update Statistics** displays information of when, where and who placed the volume into a move to the target location. These values are set automatically on creation of the volume and are non editable fields.
