

Volume Scanned Location

A [Volumes](#) Current Location is the last [Repository](#) the [Volume](#) was confirmed at. If the Current Location matches the Target Location it is also the physical location the [Volume](#) should be at.

If [Slotting](#) is enabled the Current Location will include the [Slot](#) allocation details as well.

The screenshot shows a software window titled "Edit Volume: 000013L6". It has a tabbed interface with the following tabs: Datasets, Attributes, VeriScore™, DR Strategies, Options, and Catalog. Below these are sub-tabs: Identity, Target Location, Current Location, Scanned Location, Notes, and History. The "Current Location" sub-tab is active, displaying a tree view of location details:

At the bottom right of the window are three buttons: "Save", "Cancel", and "Help".

The Virtual Location panel displays:

- [Repository](#).
- [Slot](#) Number allocation.

If [Slotting](#) is not enabled, or no [Zones](#) mapped to the [Repository](#), [Slot](#) number field will not be displayed.

The Physical Location displays:

- The [Zone](#).

- [Slot](#) location

The **Physical Location** is a physical representation of where the [Slot](#) is located based on racking parameters, such as number of drawers/shelves and [Slots](#) per drawer/shelf, to enable users to easily locate the Current Location. If [Slotting](#) is not enabled, or no [Zones](#) mapped to the [Repository](#), [Zone](#) will display as No-Alloc, [Slot](#) will display as zero.

Expanding the lower section **Update Statistics** displays information of when, where and who placed the [Volume](#) into a move to the Target Location. These values are set automatically on creation of the [Volume](#) and are non editable fields.
