2025/12/01 12:47 1/2 Volume Target Location

# **Volume Target**

When a volume is placed in a move from its' current location to another location, that other location is a target location until the volume is has a confirmed arrival.

If slotting is enabled the target location will, when a slot is assigned, include the slot allocation details as well.

### The **Relative location** panel (A) displays:

- Repository-ID and Description.
- Slot Number allocated.
- Maximum number of slots assigned to the target repository.

#### The **Absolute Location** (B) displays:

- The Zone-ID.
- · Level location.

## Last update: 2025/01/21 22:07

#### Slot loction

The absolute location is a physical representation of where the slot is located based on racking parameters, such as number or drawers/shelves and slots per drawer/shelf, to enable users to easily locate the target location.

Expanding the lower section **Update Statistics** (C) displays information of when, where and who placed the volume into a move to the target location. These values are set automatically on creation of the volume and are non editable fields.
