

# Volume Target Location

When a [Volume](#) is placed in a move from its' Current Location to another Location, that other Location is a Target Location.

Once the [Volume](#) is confirmed at the Target Location, the [Volume's](#) Current Location is updated to match the Target Location, removing the [Volume's](#) Move (M) [Flag](#) and Move Status.

If [Slotting](#) is enabled the Target Location will, when a [Slot](#) is assigned, including the [Slot](#) Allocation details.

The screenshot shows the 'Edit Volume: 000013L6' window with the 'Virtual Location' panel expanded. The panel displays the following information:

| Virtual Location  |                                      |
|-------------------|--------------------------------------|
| Repository        | Offsite Vault                        |
| Slot              | 282                                  |
| Physical Location |                                      |
| Zone              | Rack C                               |
| Slot              | 9.2                                  |
| Update Statistics |                                      |
| When              |                                      |
| Date              | Monday, April 05, 2021 (63 days ago) |
| Time              | 15:25:09                             |
| UTC Offset        | 600 minutes                          |
| Time at source    | Monday, April 05, 2021 - 15:25:09    |
| Time Zone         | AUS Eastern Standard Time            |
| From              |                                      |
| Machine Name      | 127.0.0.1 (GazillaByte)              |
| Details           |                                      |
| Connection Count  | 2,134                                |
| First Connection  | Sunday, August 04, 2019 - 16:44:36   |
| Last Connection   | Tuesday, June 08, 2021 - 09:29:19    |
| Interface         | TMSS10SlotAllocation                 |
| Operating System  | Windows                              |
| As                |                                      |
| User-ID           | doco                                 |
| User Name         | doco                                 |

At the bottom of the window, there are three buttons: 'Save', 'Cancel', and 'Help'.

The Virtual location panel displays:

- Target [Repository](#).
- [Slot](#) Number allocated (if [Slotting](#) is enabled and [Volume](#) is allocated to a [Slot](#)).

If [Slotting](#) is not enabled, or no [Zones](#) mapped to the [Repository](#), [Slot](#) number will display as zero.

The Physical Location displays:

- The [Zone](#).
- Level location.
- [Slot](#) location

The physical location is a physical representation of where the [Slot](#) is located based on racking parameters, such as number or drawers/shelves and [Slots](#) per drawer/shelf, to enable users to easily locate the Target Location. If [Slotting](#) is not enabled, or no [Zones](#) mapped to the [Repository](#), [Zone](#) will be displayed as No-Alloc, [Slot](#) will display as zero.

Expanding the lower section Update Statistics displays information of when, where and who placed the [Volume](#) into a move to the Target Location. These values are set automatically on creation of the [Volume](#) and are non editable fields.
