

Repository Option: Highwater Offset

The **Repository** Option **Highwater Offset** lowers the **Slot** allocation below the total number of **Slots** currently allocated to this Repository.

For example if the total allocation of **Slots** to this Repository is 500, setting the **Highwater Offset** to 100 will stop TMS10SlotAllocation assigning any Volumes above **Slot400** (ie 500 total **Slots** - 100 **Highwater Offset Slots** = 400 assignable **Slots** (1 to 400)).

Highwater Offset Options

Number of **Slots** to make un-assignable.
