

Repository - NoReslot

By default, the [Slotting Command Line Program](#) will free up a slot as soon as a [Volume](#) is put in a [Move Status](#) to another [Repository](#).

Setting the NoReslot Option for a Repository will ensure that the [Slot](#) is not released until the Volume is [Confirmed](#) into the new Repository.

This option can be set using the [Batch Loader](#) key option `option_noreslot`.
