Printing Unqualified Barcode Labels

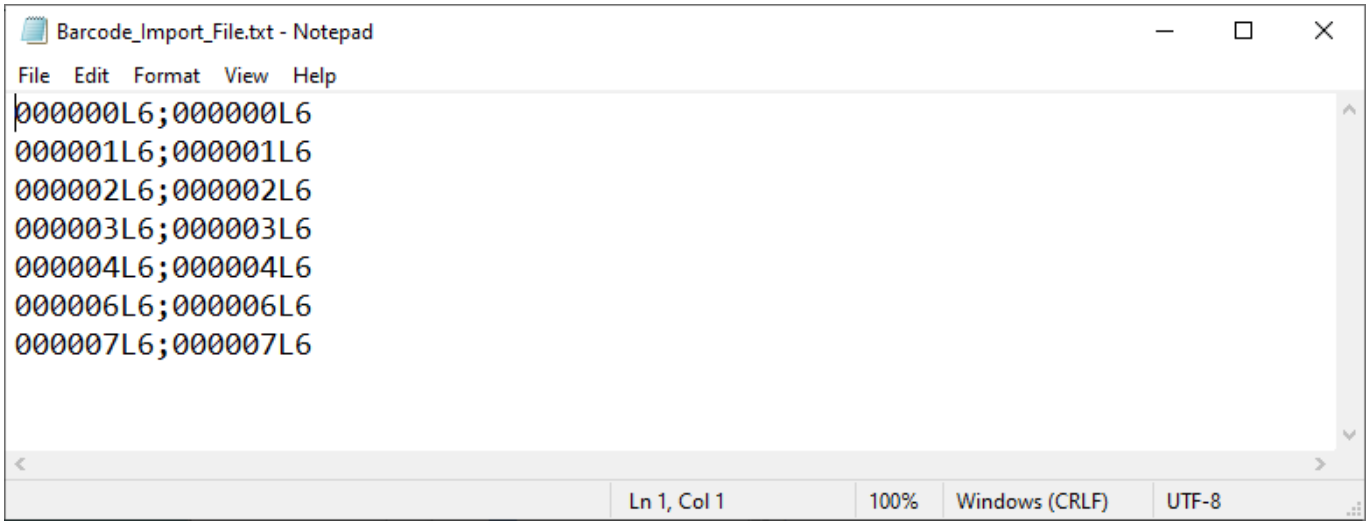

Printing Unqualified Barcodes with TapeTrack Barcode Printer is accomplished by loading the Barcodes via a text file.

Creating The Barcode Text File

Information in the text file has the format of `barcode:text_under_barcode`, one barcode per line.

The Barcode Text File can be created several different ways, which method is best used depends on the quantity of Barcode labels required.

If only a couple of labels are required, the easiest method is to use a text editor like Notepad to manually type the labels required.
